David Sellers is Senior Engineer with Facility Dynamics Engineering. Their core business is building commissioning and control system design. They also do some forensic engineering, mostly to diagnose and correct problems with building systems, typically on the mechanical side. With over 40 years of experience David has worked in the following areas:

- An airframe and power plant mechanic in general and corporate aviation
- A field technician, designer, and project engineer for a field savvy consulting engineering firm,
- A systems engineer for a major control contractor,
- A field and control engineer for a mechanical contractor,
- System owner or co-owner for the HVAC, Fire Protection, Process Exhaust, Chilled Water, and DDC Control systems at a semi-conductor wafer facility
- Senior engineer for a not-for-profit focused on developing infrastructure to support the commissioning industry (PECI)
- Senior engineer for Facility Dynamics Engineering

In addition to his project work, David maintains the FDE commissioning blog - *A Field Perspective on Engineering* - and the related commissioning resources web site.

David holds a B.S. from Parks College of St. Louis University in Aircraft Maintenance and Engineering, and is a licensed airframe and power plant mechanic. He also is a registered professional engineering in the states of Missouri and Washington, and was the 2017 Benner Award Winner at the National Conference on Building Commissioning.
