Bill Coad inspires me to think a • different way...

... that is to practice our profession with an emphasis upon our responsibility to protect the long-range interests of the society we serve and, specifically, to incorporate the ethics of energy conservation and environmental preservation in everything we do. ASHRAE Journal, vol. 42, no. 7, p. 16-21 www.ASHRAE.org

FORUM

Energy Conservation Is an Ethic

"The fact is that civilization requires

slaves. The Greeks were quite right

there. Unless there are slaves to do

the ugly horrible uninteresting work,

culture and contemplation become al-

most impossible. Human slavery i.

mechanical slavery, on the slavery of

wrong, insecure and demoralizing, On

the machine, the future of the world

about over long and short distances,

speeds, keep our records, and on and on.

Oscar Wilde could not have envisioned

It is not within the context of this article

to expound on the influence of technol-

nificance of that statement

William I Coad PE Fellow/Life Member ASHRA

rofessionalism means different things to different people. For some, professionalism in engineering describes a method of charging for services; others believe it simply describes a credential achieved. But Webster's Collegiate Dictionary defines "professional" as: "... characterized by or conforming to the technical or ethical standards of a calling requiring specialized knowledge and often long and intensive academic preparation.

depends

Thus, a "professional" is a person who can be so described. Just what is it that the mechanical/elec-

trical engineering professional does to earn that title? In a way, the engineering professional hasn't had good "press" or public relations for the past 150 years. It started in the early to mid-19th century when Maxwell, Sadi Carnot, Diesel, Otto, and the other thermodynamicists and energy engineers unlocked the secrets to turning the resources of the world into the slaves of mankind. Since that time, the mechanical/electrical engineering community has held the goose that laid the golden egg. And somewhere within that community, they became so intent upon serving humanity in the short run that they lost sight of their long-range responsibility.

This is a good news/bad news story, and, as society stands here today, they cannot be too critical of their performance over the past 150 years. The mechanical/ electrical engineering professionals have provided humanity with a massive popuation of "mechanical slaves." That analogy is borrowed from Oscar Wilde, who wrote in an essav in 1894:

www.ashraejournal.org 16

ASHRAE Journal

tific changes that transformed America in those years (the fifties) is an extraor dinary one-the coming of network television to almost every single home in the country changed America's politics, its leisure habits, and its racial attitudes; the arrival of air condition ing opened up southern and southwestern regions; the early computers were transforming husiness and the military; the coming of jet planes revolutionized transportation

And that was but one decade! And in one country! So, looking back, the engineering community can bask in the knowl edge that they did a pretty good job. They rtainly changed the world.

But going back to Oscar Wilde's me chanical slave-the mechanical slave like the human slave, needs food. The food for the mechanical slave is energy The most available energy sources, those that are most readily available and which we have been using for these 150 years The result of our success in creating are the nonreplenishable energy re this mechanical slave is the world in which sources of the earth.

we live today. We have the mechanical Now, returning to the topic of profes slave at our bidding to wash our clothes, sionalism, and paraphrasing the definicook our food, wash our dishes, move us tion for engineering professionalism: Engineering professionalism is charstoke our fires, keep us cool, clean our acterized by conformance to the techni homes, operate our factories, perform cal and ethical standards related to the complicated calculations at unbelievable practice of engineering

The technical standards are self-evident. So, focusing on the ethical stan-dards, the definition of ethics is "...a set in his wildest dreams, the prophetic sigof moral principles or standards." Now, consider our situation as we stand

About the Author

ogy upon the state of mankind-the social structures, economy, and human rela-William J. Coad, P.E., is with McClure Engineeri tionships. In his book, The Fifties, David Associates in St. Louis. He serves on the ASHRAE Halberstam, discussing the sociological eutive committee as treasurer, and is vice chair of revolution unfolding in the fifties, said: Regions Council. He has held various leadership tions within ASHRAE and is presently active on "The list of technological and scien-Technical Committees 1.10, 6.1, and 8.10,

July 2000

- I change career paths and go to work for McClure Engineering in St. Louis, MO
 - Field technician
 - Control system designer
 - Mechanical designer
 - Project engineer
- I am blessed with great mentors (through-out my career)

- I go on sabbatical to work for MCC Powers
 - Immersed in a specific system
 - Exposed to process control
 - I figure out how to (inadvertently) crash a control system
 - Begin to realize there is a fundamental lack of understanding of control systems on the part of many designers

- My sabbatical continues as I work for Murphy Company, Mechanical Contractors
 - Control guy
 - Start-up guy
- I (inadvertently) develop a destructive test procedure to verify duct pressure class
- I understand what David St.Clair meant when he said It's all about the lags
- I discover I don't like gambling

- I return to McClure Engineering as a Project Engineer
 - Migrate their control design standards and specs from pneumatics to DDC
 - Do a lot of Health Care work

1997

- Move to Oregon to become a facilities engineer at Komatsu Silicon's Hillsboro facility where I become
 - HVAC system owner
 - Process exhaust air side system owner
 - Central chilled water plant system co-owner
 - DDC system co-owner
 - Fire protection system owner (inadvertently)

- Semiconductor industry market
 turns down
 - Plant idled
 - I move to PECI
 - Not-for-profit focused in energy efficiency and sustainability
 - Develop infrastructure for the commissioning industry
 - Discover I can teach if its hands on and technical

2005 - Present

- I move to FDE
 - Some new construction Cx
 - Mostly EBCx
 - Third party control system design work
 - A lot of hands-on training
 - Pacific Energy Center
 - Marriott
 - CERL/IMCOM
 - Assume leadership role for FDE's Not-For-Profit division (inadvertently)

What Is Commissioning?

Main Entry: commission \kə-'mi-shən\ Function: transitive verb Inflected Form(s): -mis·sioned; com·mis·sion·ing /-'mi-sh(&-)ni[ng]/

1 : to furnish with a commission: as a : to confer a formal commission on <was commissioned lieutenant> b : to appoint or assign to a task or function <was commissioned to do the biography>

2 : to order to be made <commissioned a portrait>

3 : to put (a ship) in commission

An analogy to a ship's sea trials or "shake-down" cruise

- Continues through construction, acceptance, the warranty period, and through the building's life cycle
- Includes functional testing
- Includes training
- Documents performance

Commissioning; Bottom line

Commissioning is a systematic process of ensuring that all building systems perform interactively according to the contract documents, the design intent and the Owner's operational needs

- Begins in predesign
- Documents the design intent
- Continues through construction, acceptance, the warranty period, and through the building's life cycle
- Includes functional testing
- Includes training
- Documents performance

Commissioning is about performance and integration

Commissioning Comes in a Number of Styles

What Is Retrocommissioning

In general terms, it's the same thing as:

- RCx
- Existing Building Commissioning
- EBCx
- Recommissioning
- Building tune-up
- MRE is Marriott's version of Retrocommissioning

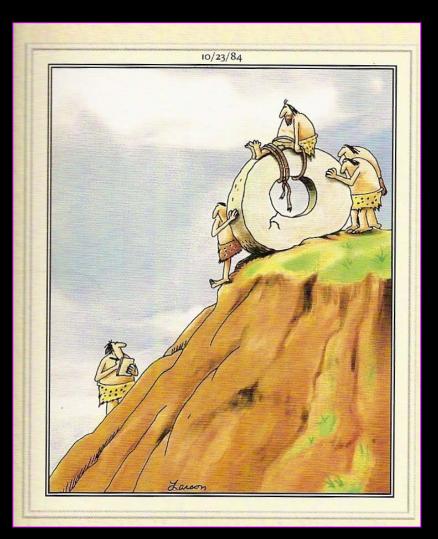

What is On-going Commissioning?

Continuous Commissioning[™] *A Trademarked Process Developed by Texas A&M* **Operating the Building Properly** *What folks called it when I started doing this stuff (1976)*

No Matter What "Flavor"

... Cx is a team effort!

The building systems aren't the only thing that will be interactive and require integration from the Cx provider

Prehistoric Commissioning Team

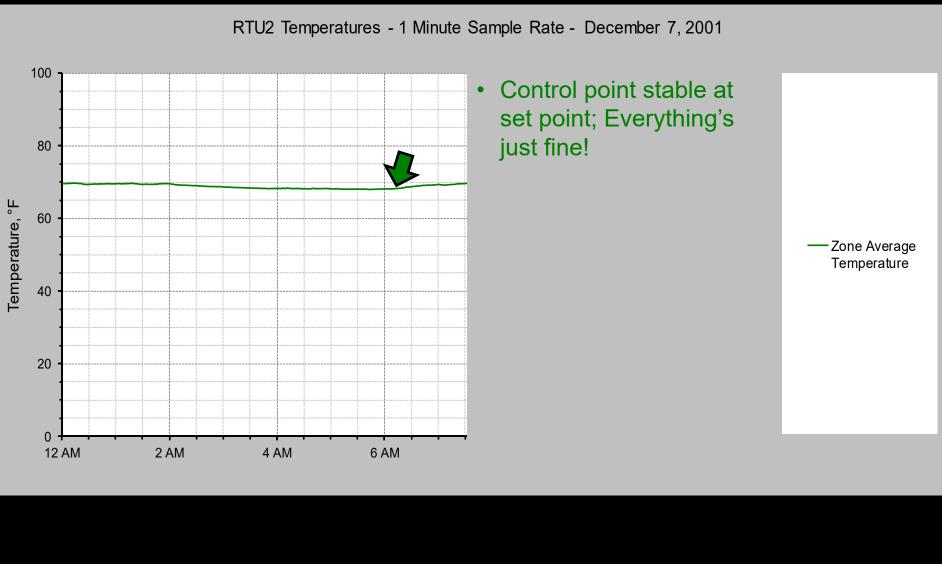

Why Do We Need to Commission?

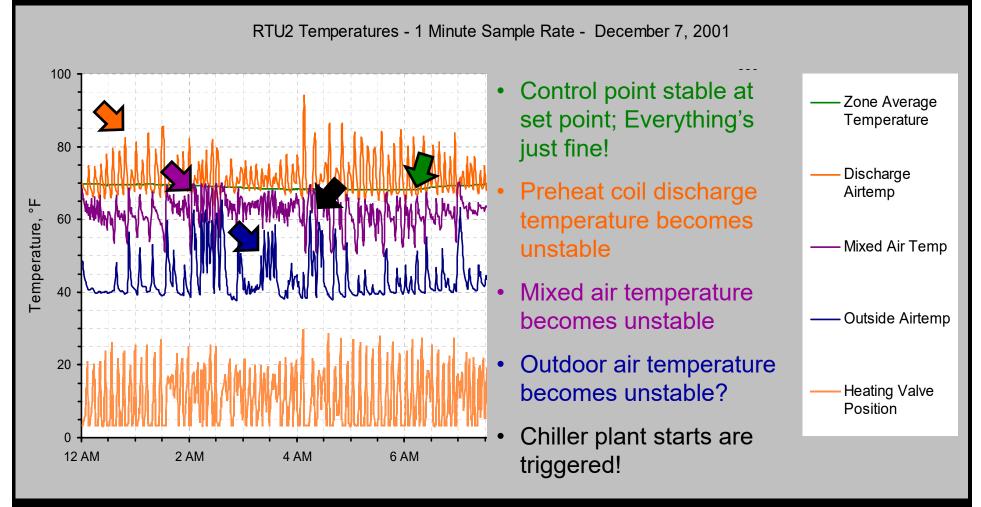

"Madame, if you are piloting an untested vehicle on its first test flight and that vehicle contains more propellant than was ever placed on a launch pad before and the vehicle was assembled by the low bidder and you aren't a little nervous, then you don't fully comprehend the situation"

Paraphrased; John Young to Barbara Walters when asked if he would be nervous as the test pilot on the first manned shuttle flight

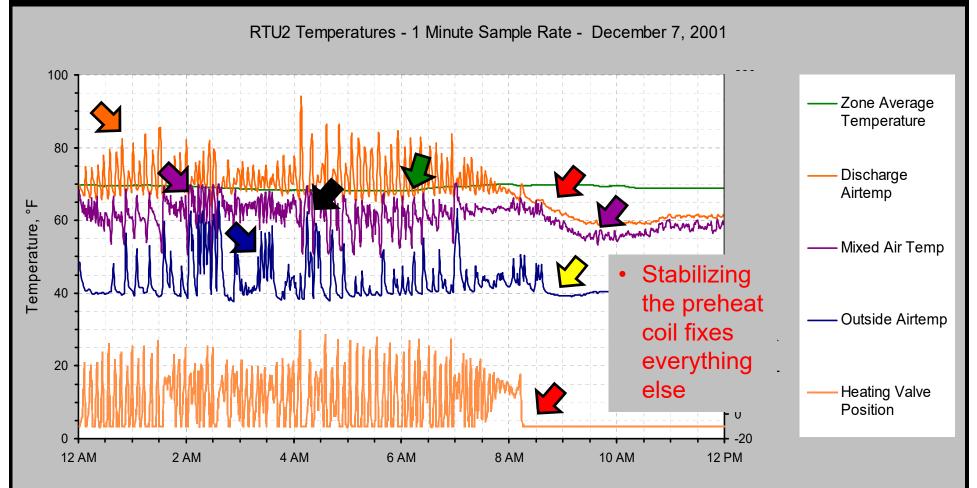

To the Casual Observer, We're Doing O.K.

But They May Not Comprehend the Situation

But They May Not Comprehend the Situation

AN OVERVIEW OF COMMISSIONING

Why Do We Need to Retrocommission Systems?

The future is not in plastics, my boy, the future is in construction.

Dr. Joseph Lstiburek

Why Do We Need to Retrocommission Systems?

The future is not in plastics, my boy, the future is in construction. Actually, the future is in fixing construction.

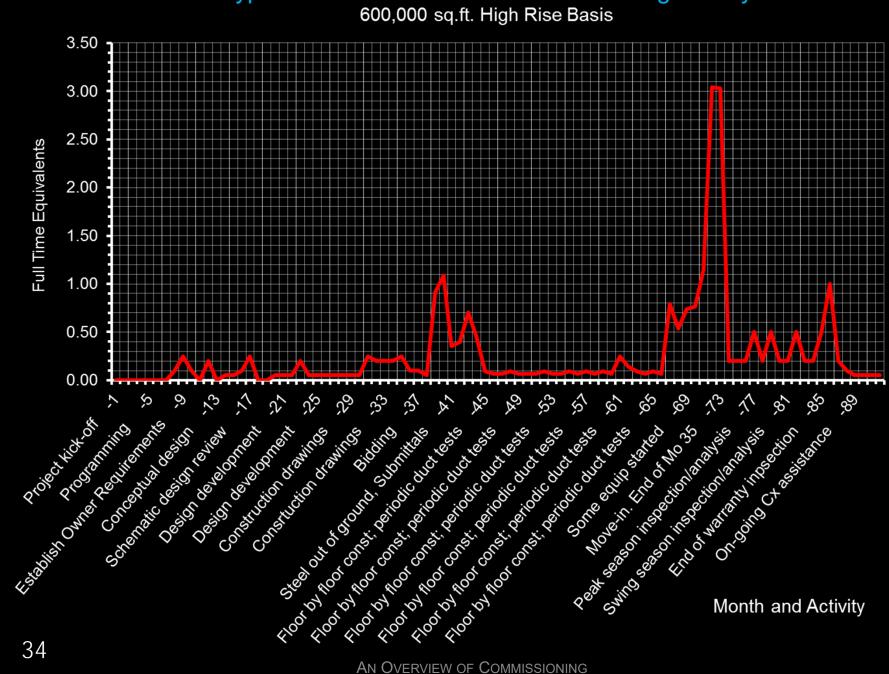

Dr. Joseph Lstiburek

Why Do We Need to Keep On Commissioning Systems?

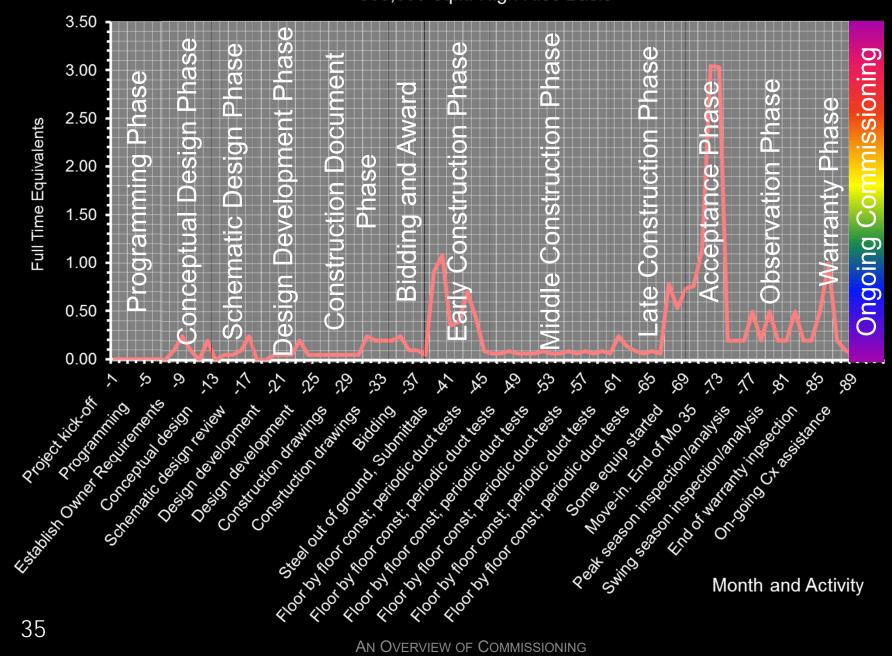

In a system, a process that occurs will tend to increase the total entropy of the universe.

2nd Law of Thermodynamics

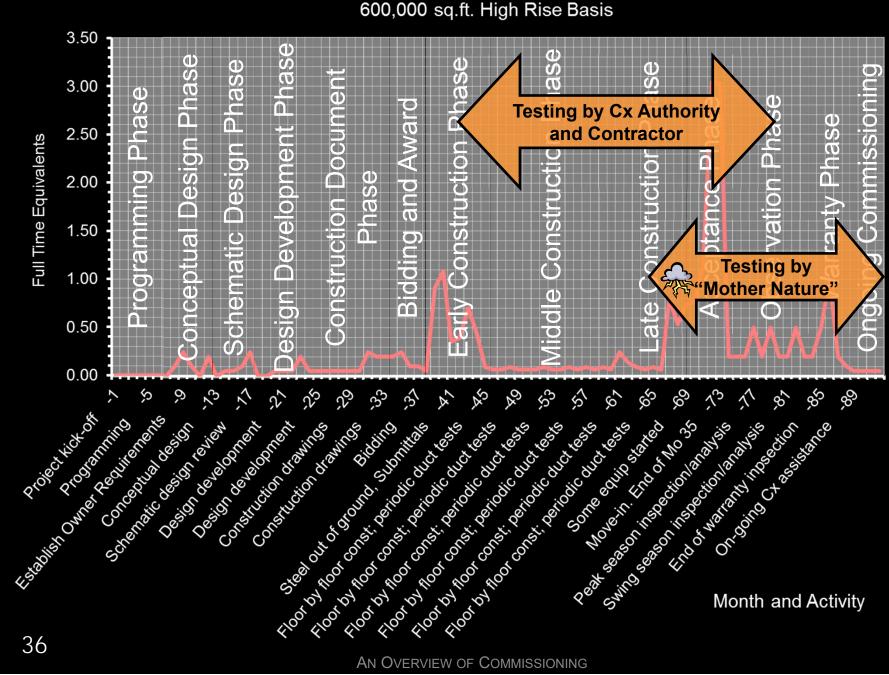

- Things wear
- Heat transfer characteristics change
- Things break
- People forget

The System Control Logic and the System Physics Need to Complement Each Other

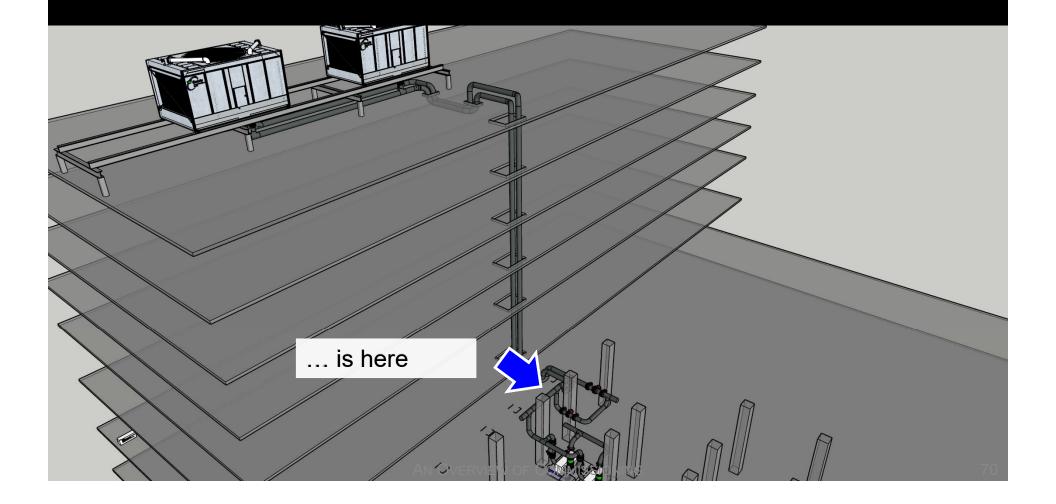

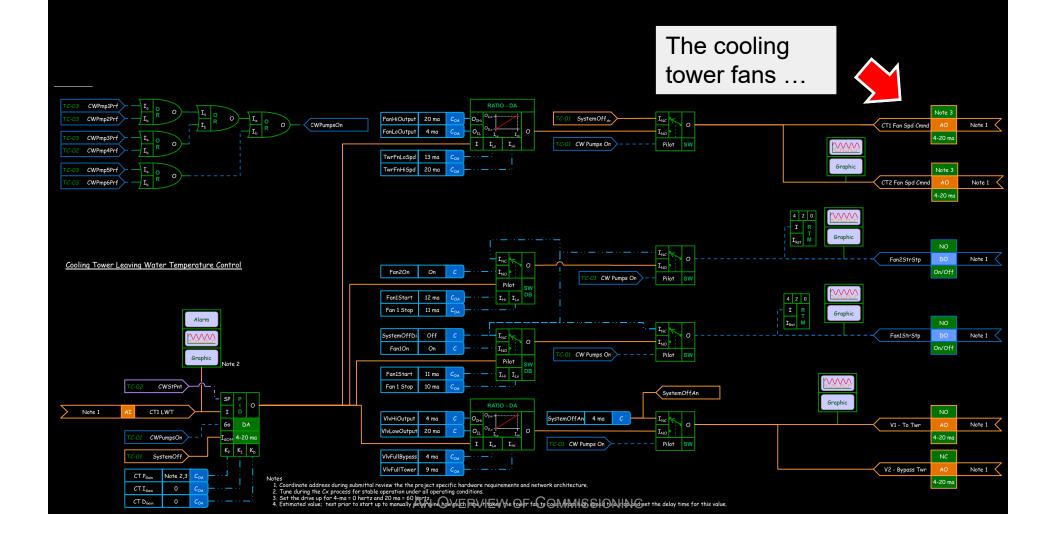

- 1. At design flow, it takes about 1-1/2 minutes for a gallon of water to travel from the bypass valves to the towers and back
- 2. At minimum flow, it takes about 15 minutes for a gallon of water to make the same journey

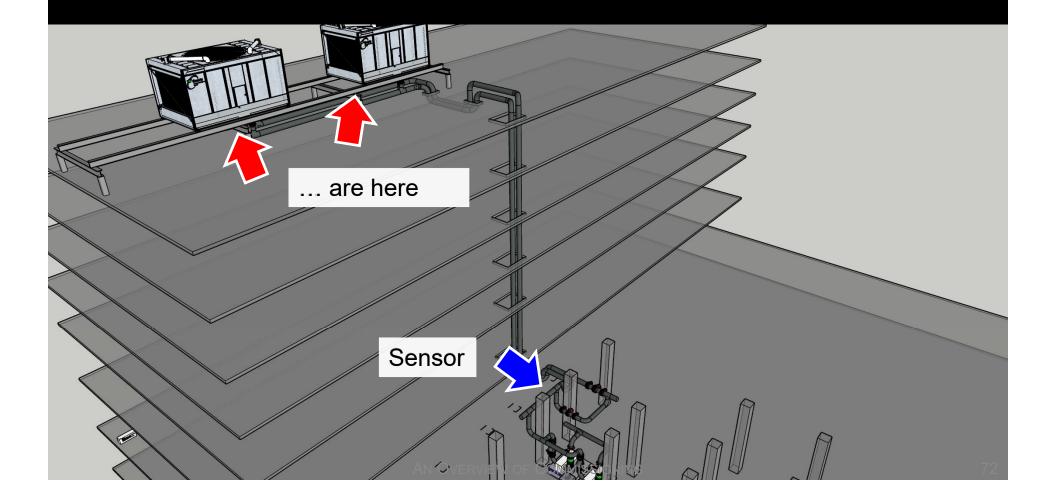

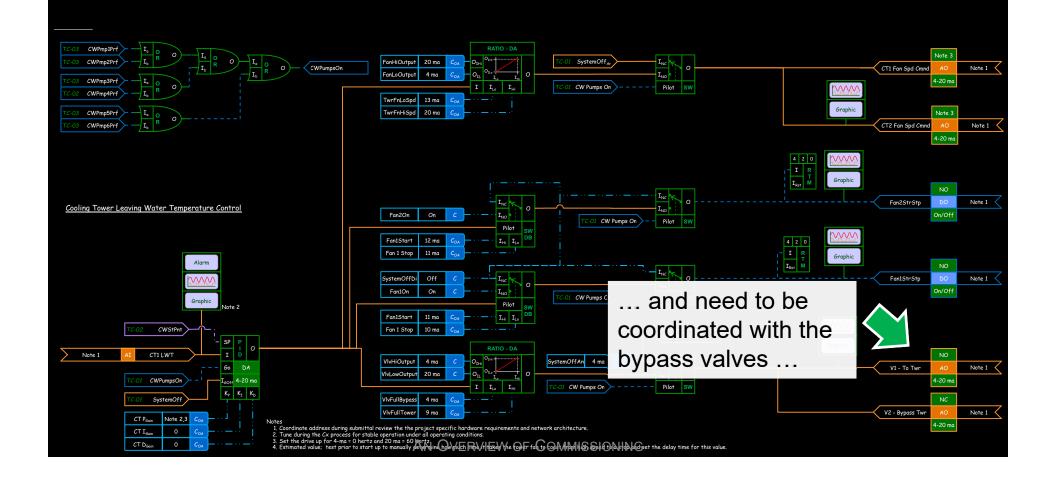

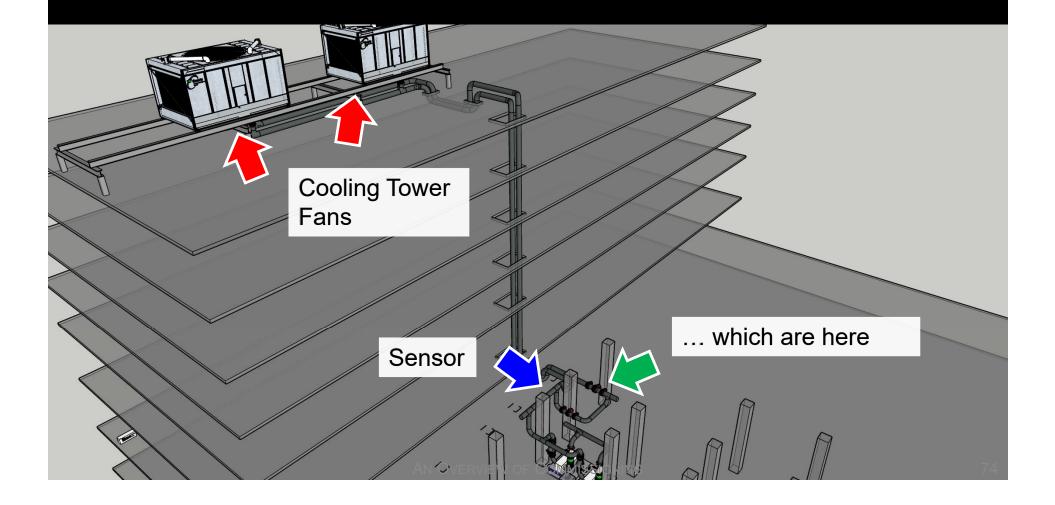

Transportation Delays can be Dynamics

The System Concept in Action

The System Concept in Action

There can be 1-1/2 to 15 minutes of delay between the time when a temperature change generated by the tower fans shows up here ...

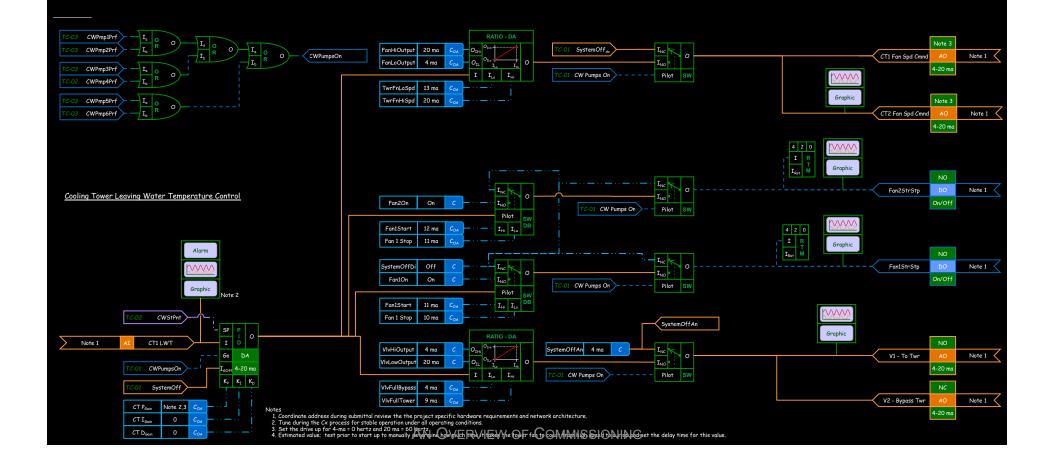

... and is detected here ...

... but the change generated by a valve moving will show up at the sensor almost immediately

75

Lags are the Enemy of Tight Control

The variable transportation delay introduces a lag into the control process that can make it difficult or impossible to tune

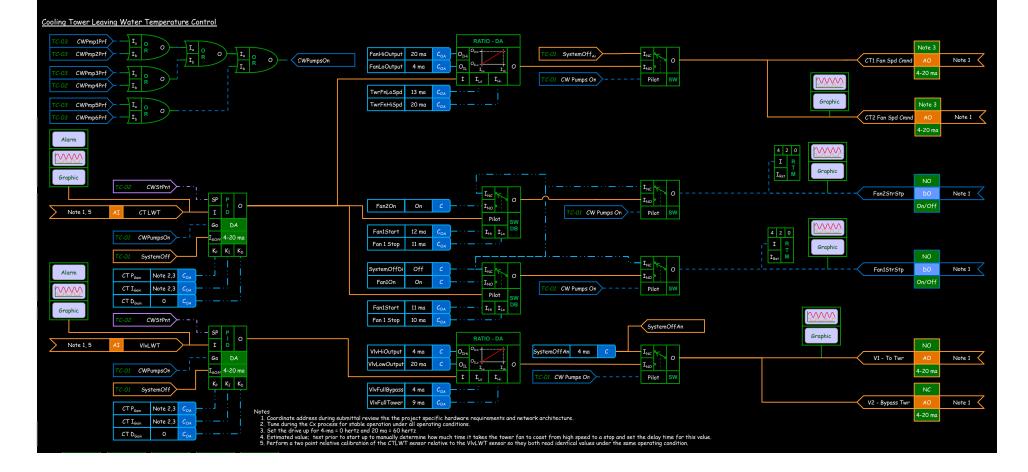

Resolving the Problem

Provide a separate sensor at roof level and related control process for the tower fans

Use this sensor to control the bypass valves

Resolving the Problem

- Coordinate the set points for the two loops
- Perform relative calibration for the two sensors that are inputs to the loops

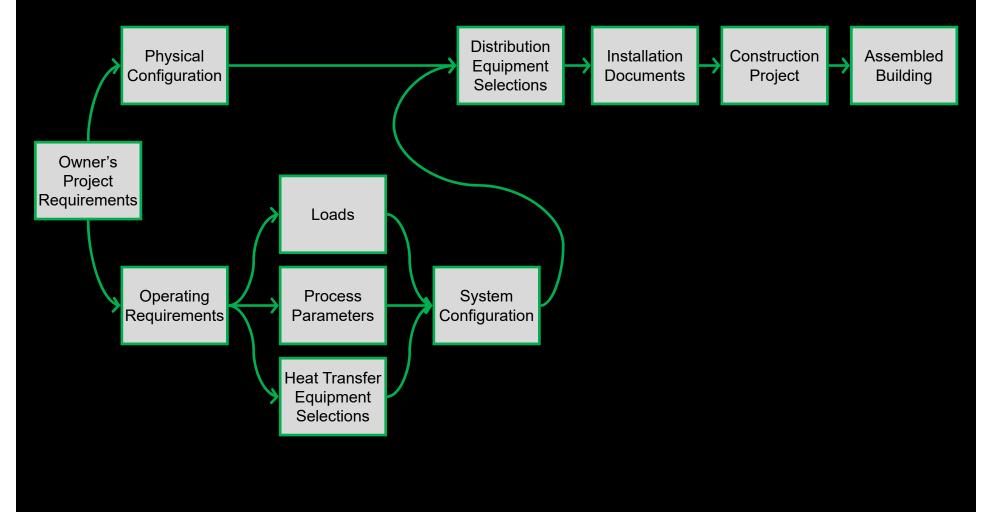

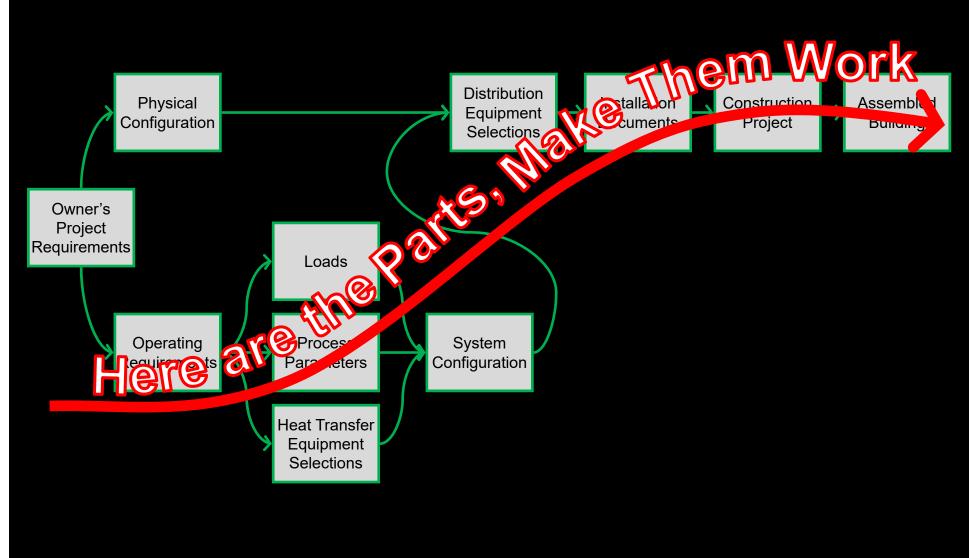

Functional Testing

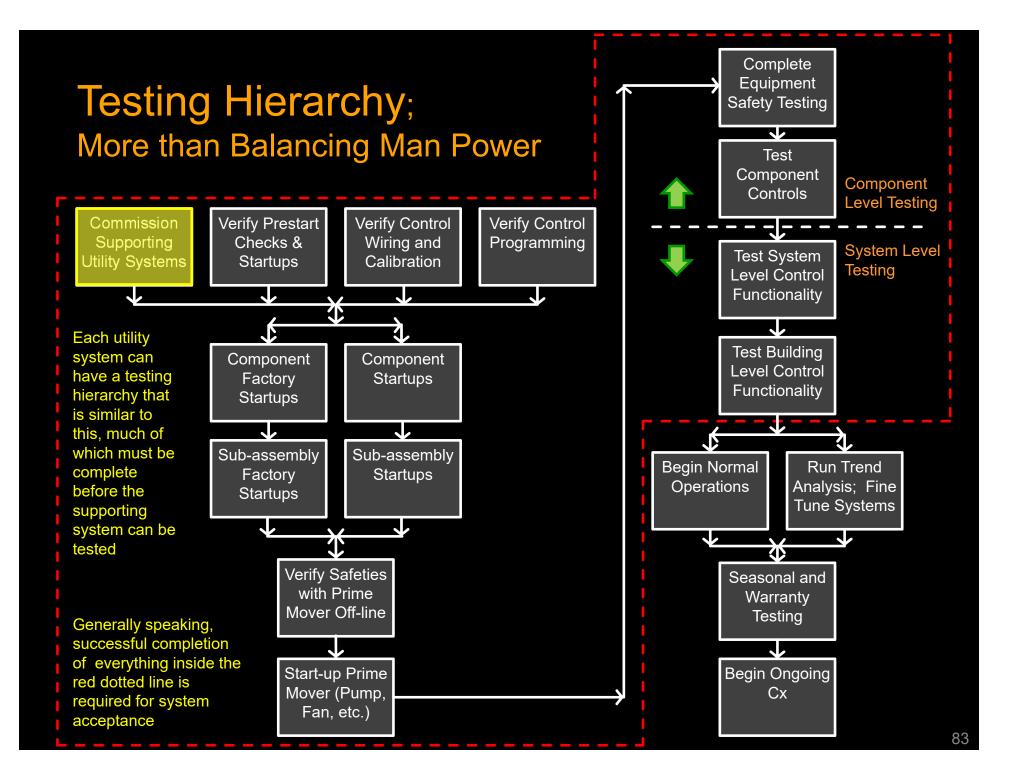

- Core element of any commissioning process
- Validates machinery and systems
 - Do they deliver?
 - Why don't they deliver?
 - Do the work well together?
 - Why aren't they working well together
 - Was it big enough?
 - How big should it be?

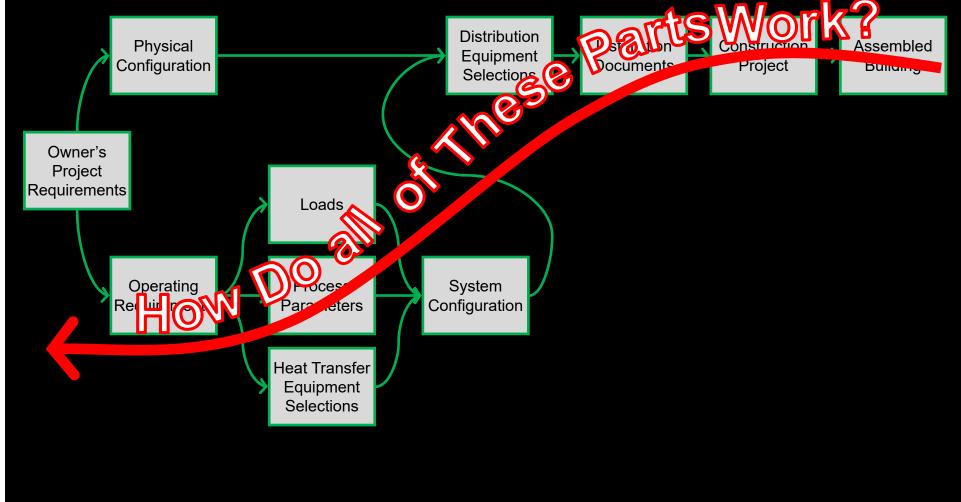

Functional Testing

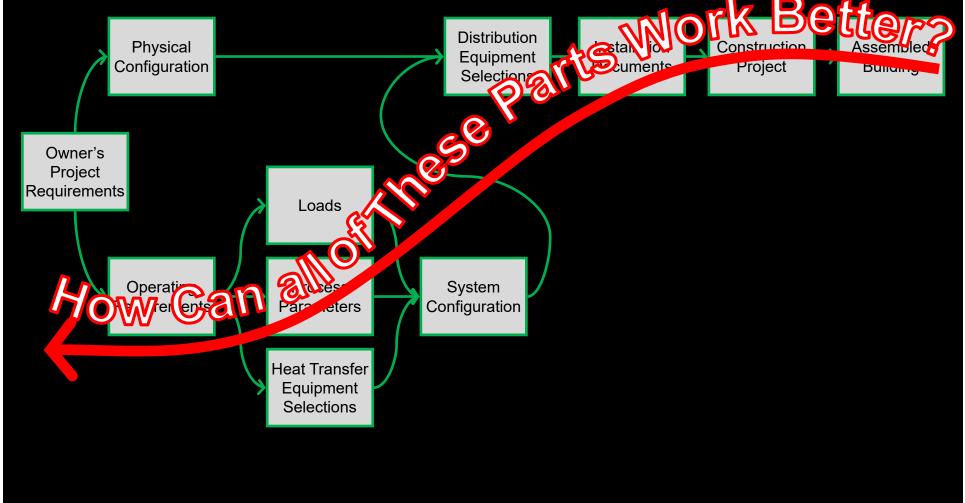

- Core element of any commissioning process
- Validates machinery and systems
 - Do they deliver?
 - Why don't they deliver?
 - Do the work well together?
 - Why aren't they working well together
 - Was it big enough?
 - How big should it be?

Forced vs. Natural Response Testing

Forced Response Testing

I force a change and watch how the system responds

Forced vs. Natural Response Testing

Forced Response Testing

I force a change and watch how the system responds

Natural Response Testing

I observe how a system responds to the normal course of events

Another Lesson from the Space Program

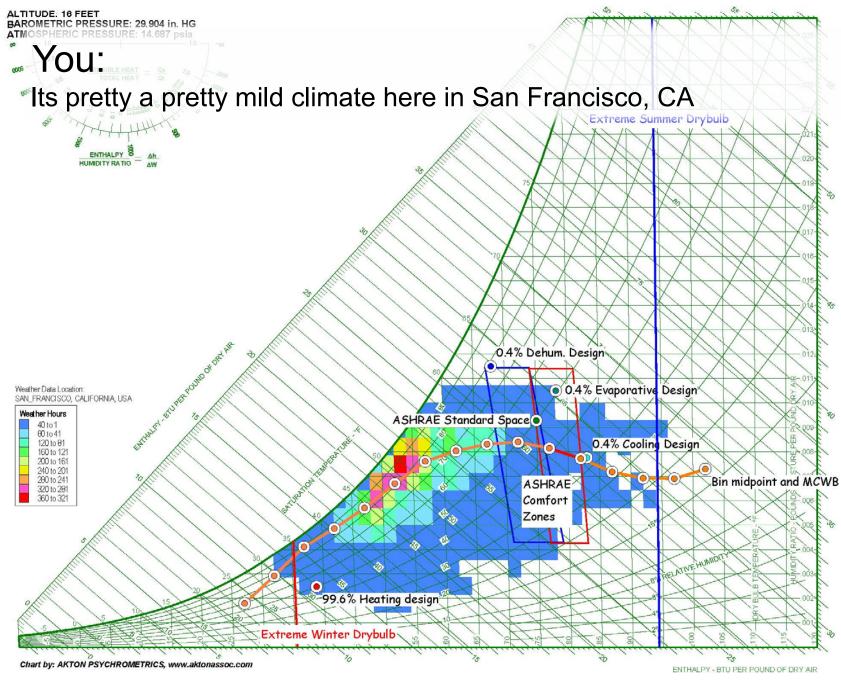

We went to explore the Moon, and in fact discovered the Earth

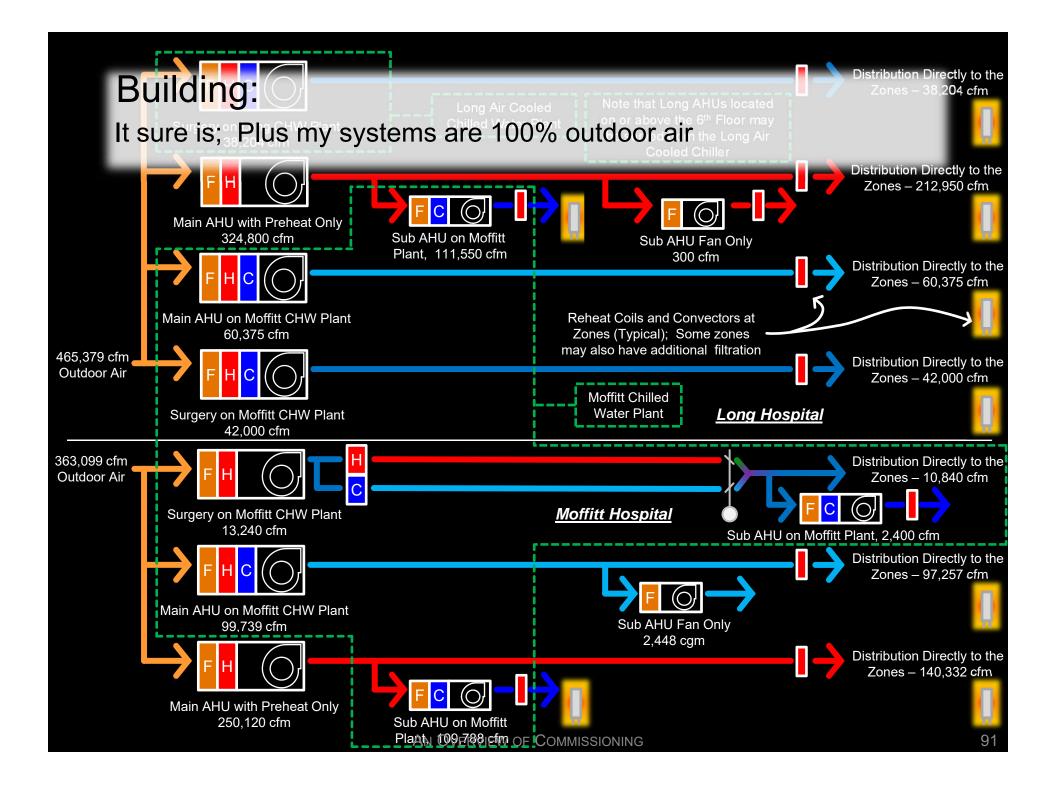

> Gene Cernan Apollo 17 Commander

The Machines are Talking To Us

In the bigger picture, commissioning is about having a dialog with a building and functional testing is one way to have the conversation

You: I doubt if your preheat coils will be doing much since its over 55°F outside

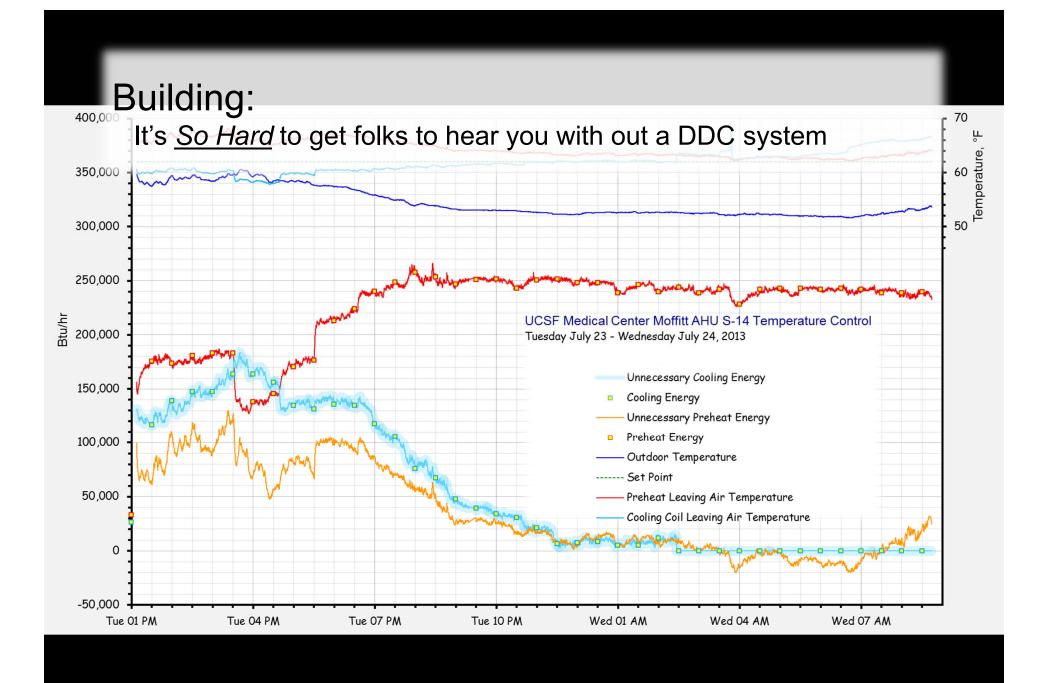

Building: Actually, a lot of the preheat steam traps are running hot today

You: Hmmm. Can we chat a bit?

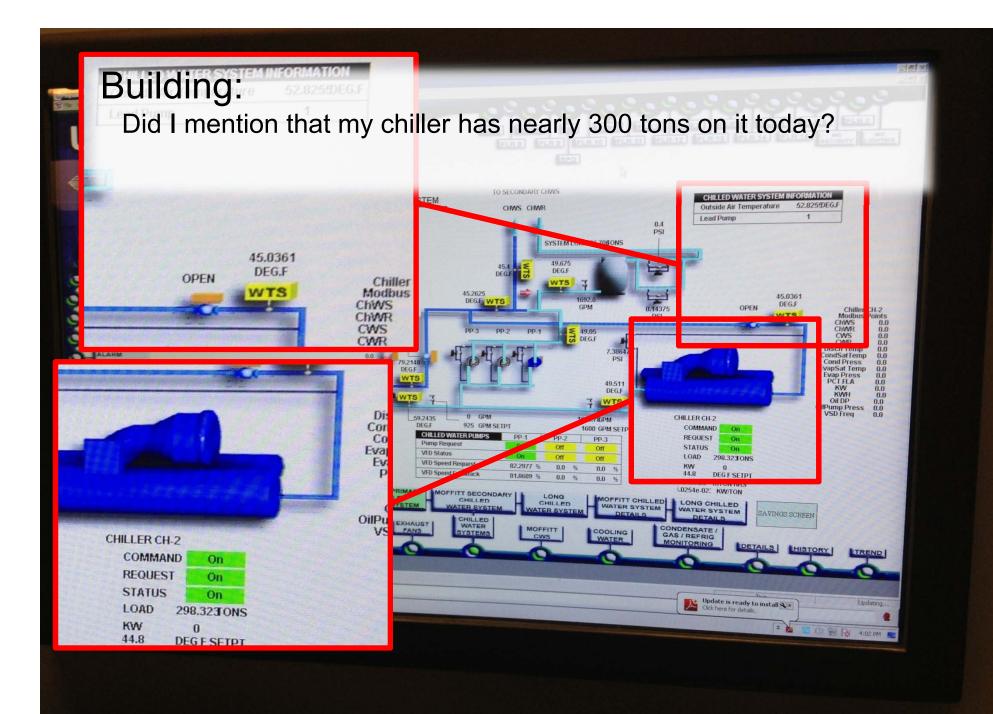

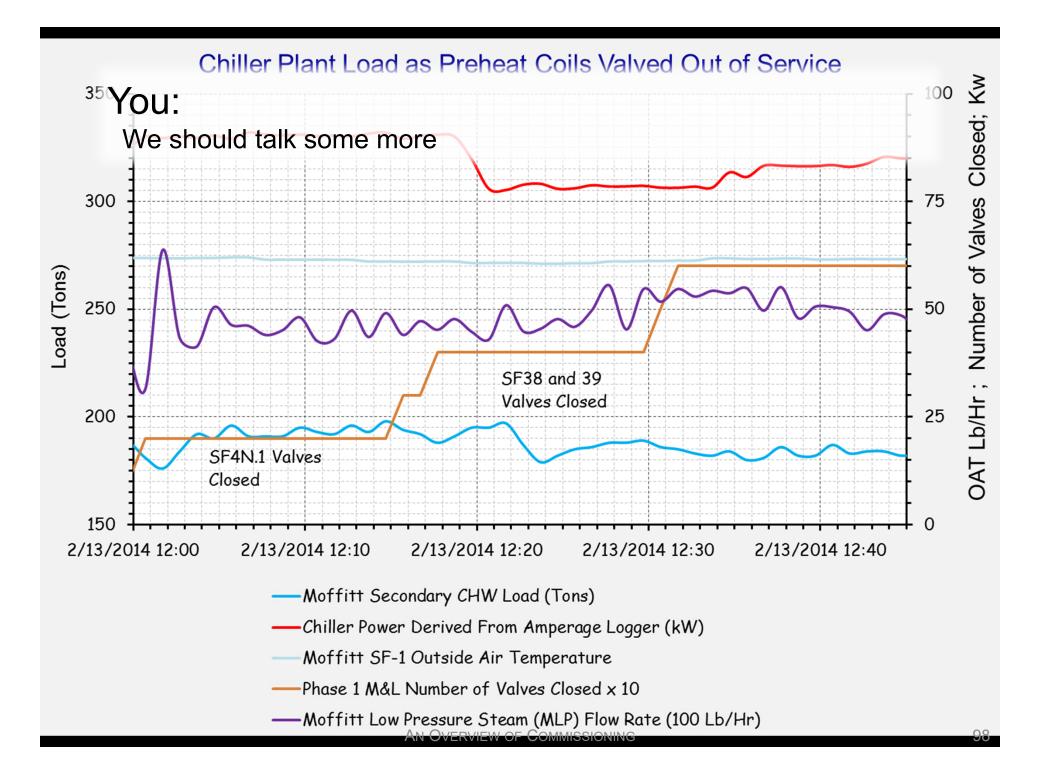

You: With a bit of time and maybe a bit more data, I suspect I can help you with that

Unnecessary Steam Use and Cost Per Day					
Steam consumption per day based on the logged data -	4,530,371	Btu per day			
-	4,788	pounds of steam per day			
-	199	pounds of steam per hour			
-	\$99	per day			
-	\$4.11	per hour			
Gas input at the plant -	5,662,964	Btu per day			
-	57	therms per day			
Approximate annual savings potential based on bin data -	Low End	High End			
	426,029	852,058	pounds of stea	m per year	
	\$8,772	\$17,543	\$ per year		
Unnecessary Chilled Water Use and Cost Per Day					
Chilled water consumption based on the logged data -	113	ton-hours per day			
	96	kWh per day at the assumed net plant efficiency			ncy
-	4	kWh per hour			
-	\$11	per day			
	\$0.45	per hour			
Approximate annual savings potential based on bin data -	Low End	High End			
	8,523	17,046	kWh per year		
	\$966	\$1,933	\$ per year

The Bottom Line

Keep Asking Questions and You Will Learn (and Save) A Lot

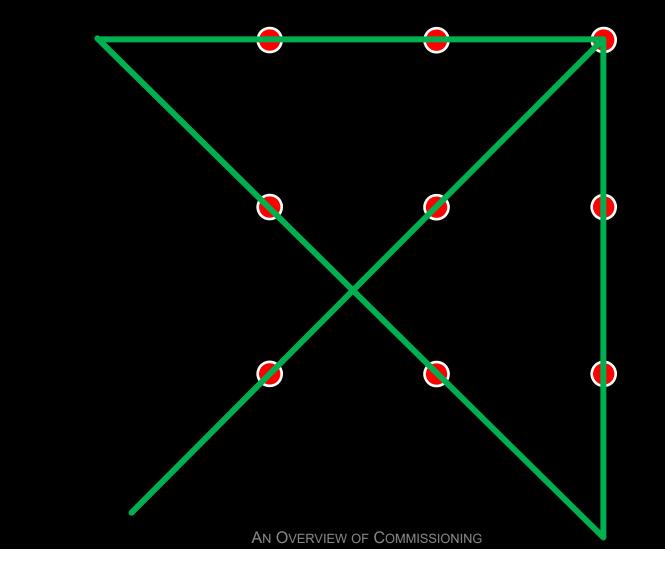

A Puzzle

Connect all of the dots with 4 straight lines with out lifting your pencil and with out retracing a line

A Puzzle

A Puzzle

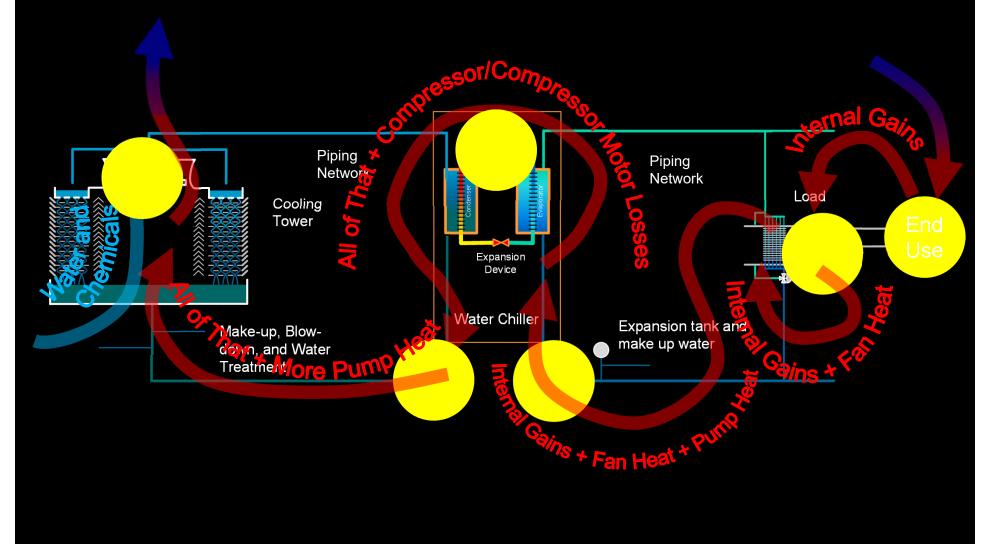

From Sarah Susanka's book titled *The Not So Big House*

Think Outside the Box!

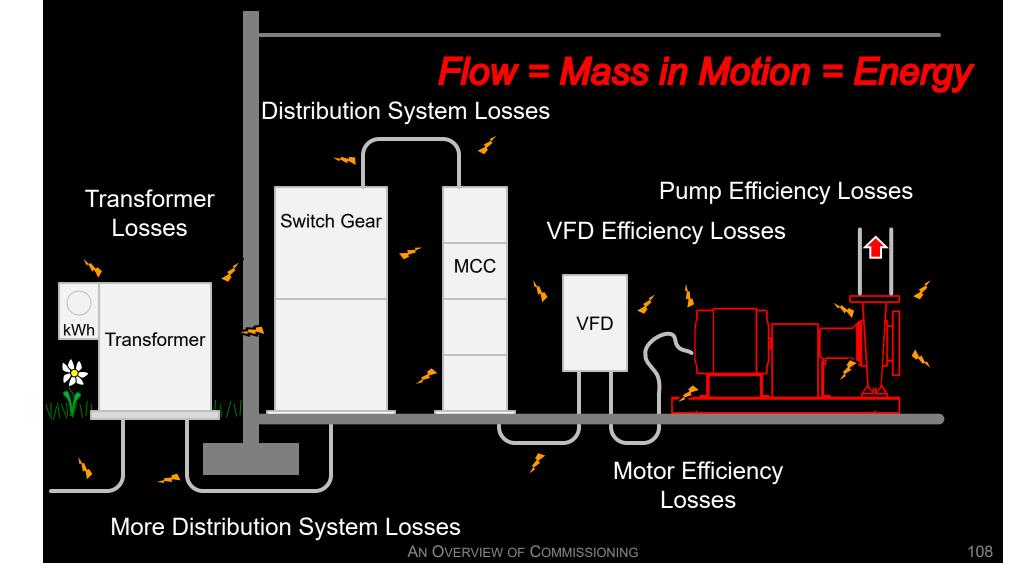

We can't solve problems by using the same kind of thinking we used when we created them

Albert Einstein

Thinking About the Bigger Picture

Thinking About the Bigger Picture

Ripple Effects A Practical Picture

Conservation of mass and energy says that other than fly ash, the mass of this coal will eventually show up as gasses going up the stack

- Most building systems run on electricity
- About 71% of the incoming power for a US facility will come from fossil fuel
 - The current heat rate for fossil fuel plants is about 10,000 Btu/kWh
 - A kWh is 3,413 Btu

Using People Power

Say I wanted to charge my cell phone with some magic machine that was powered by the motion I use to walk. If I wanted to do it in an hour walk, I would need to provide the additional 6.17 watts of delivered energy to the cell phone battery along with the efficiency losses of the magic machine I was using along with the efficiency losses associated with my body working.

- -		
	Delivered power -	6.17 watts
	Magic machine efficiency -	74%
	Power out of body into magic machine -	8.34 watts
	Body efficiency -	22%
	Additional power into body -	37.90 watts
	Walking plus charging phone -	302.88 watts
	Equivalent pace -	4.30 mph
		13.95 minutes per mile
Kathy'	s and my walking power rate at 3.6 mph -	264.98 watts
Walking powe	r if some of it went to charge an iPhone -	227.08
	Equivalent pace -	2.90 mph

Using People Power

My Logic Based Conclusion; We Have to be Having Some Sort of Impact AN OVERVIEW OF COMMISSIONING

Video downloaded from the Earth System Research Laboratory Global Monitoring Division at <u>http://www.esrl.noaa.gov/gmd/ccgg/trends/history.html</u>

Commissioning is Fun

Ten Key Retrocommissioning Skills

- 1. Be Able to Benchmarking and Perform Utility Analysis
- 2. Be able to Scope a Facility
- 3. Be Familiar with Fundamental Principles and HVAC
- 4. Understand and Apply the System Concept
- 5. Be Able to Perform Data Logging and Trend Analysis

- 6. Be Familiar with Functional Testing Techniques
- 7. Be Familiar with Data Analysis Techniques
- 8. Be Familiar with Basic HVAC and Energy Calculations
- 9. Be Familiar with Cost/Benefit and Return on Investment Calculations
- 10. Develop a Competency with Control Systems

Ten Key Retrocommissioning Skills

- 1. Be Able to Benchmarking and Perform Utility Analysis
- 2. Be able to Scope a Facility
- 3. Be Familiar with Fundamental Principles and HVAC
- 4. Understand and Apply the System Concept
- 5. Be Able to Perform Data Logging and Trend Analysis

<u>.</u>	Be Familiar with Fundamental
	Principles:

- 1. Loads
- 7. 2. Centrifugal Machines
 - 3. Piping Systems
- 8. 4. Refrigeration and Cooling Equipment
 - 5. Heating Equipment
 - 6. Variable Flow Water Systems
 - 7. Duct Systems
 - 8. Economizers
- 10 9. Makeup and Exhaust Systems10.Variable Air Volume Systems

More info at https://av8rdas.wordpress.com/2014/01/14/key-retrocommissioning-skills/;

A technical guide and checklist is available at http://www.av8rdas.com/ebcx-skills-guidebook.html
